

# Waterson Terminal Services

ISO: 9001:2015 QMS • 14001:2015 EMS • 45001:2018 OHSM

At Waterson Terminal Services, we are dedicated to fostering a sustainable future through responsible environmental stewardship. Our mission is centered around facilitating trade and connectivity while minimizing our environmental footprint. As a crucial hub in the supply chain, we recognize the importance of operating in harmony with our surroundings and are committed to improving environmental outcomes.

We acknowledge the environmental impacts our operations can have, and we are resolved to manage these impacts effectively. This includes implementing measures to reduce emissions, conserve resources, and protect biodiversity.

We have high expectations for the environmental practices of our external partners, including suppliers and contractors. We actively seek out suppliers who share our commitment to sustainability and encourage all stakeholders to prioritize environmental considerations in their operations.

Compliance with applicable environmental laws is not just a requirement, but a fundamental principle of our operations. We pledge to adhere to all regulatory obligations, viewing them as the baseline for environmental performance.

Education and training are vital components of our environmental strategy. We invest in empowering employees with the knowledge and skills necessary to understand the environmental implications of their actions and to actively participate in sustainability initiatives.

Regular monitoring and review of environmental outcomes against established targets and objectives are integral to our approach. Waterson Terminal Services conducts comprehensive assessments annually as part of two certifications we are proud to hold: an ISO 14001:2015 Environmental Management Systems Certification, and the Green Marine Environmental Program Certification.

Notably, we are preparing for our inaugural Greenhouse Gas Emissions Audit in FY25, a pivotal step in our journey towards environmental sustainability. Additionally, we are embarking on a Master Plan process in coordination with the City of Providence and the University of Rhode Island, demonstrating a proactive approach to long-term environmental planning.

Lastly, we are committed to transparently communicating our environmental aims and objectives to all stakeholders, including employees, customers, investors, and the broader community. By fostering open dialogue and collaboration, we aim to build trust and inspire collective action towards a more sustainable future.

Together, with dedication and innovation, we will continue to strive for environmental excellence in all aspects of our operations at Waterson Terminal Services.

Sincerely,

Chris Waterson
